

Practise tasks:

Note: Please use ES6 features to write the programs

1. Rewrite the function using class syntax -
<https://plnkr.co/edit/MmhvN3wn0sUBqjwR?p=preview&preview>
2. Create an array which would have list of products, using spread operator copy the products into checkout array.
3. Define a object which would have user details, using object destructuring, print all its values
4. Use default parameters, wherever necessary
