

Practise tasks: Fetch API

1. Fetch data from an API: we can use a simple JSON API that returns 1 article:

<https://jsonplaceholder.typicode.com/posts/>

2. Once you have article data render it onto a html page as a list, we want to render the ID, TITLE and BODY of the article.
3. You should also handle the fact the API may not return something back and show an error message instead. So if a Promise is rejected then let a user know that something was attempted but it failed.

4. Your UI should look similar to :

ID: 1
Title: sunt aut facere repellat provident occaecati excepturi optio reprehenderit
Body: quia et suscipit suscipit recusandae consequuntur expedita et cum reprehenderit molestiae ut ut quas totam nostrum rerum est autem sunt rem eveniet architecto

ID: 2
Title: qui est esse
Body: est rerum tempore vitae sequi sint nihil reprehenderit dolor beatae ea dolores neque fugiat blanditiis voluptate porro vel nihil molestiae ut reiciendis qui aperiam non debitis possimus qui neque nisi nulla
